

Dear Members of the Public Health Committee:

Please vote no on bill 7199 for the following reasons:

Item 1 of the Nuremberg Code protects our right to informed consent. **All vaccine mandates are in violation of this code.**

In addition to being against government mandates for medical care while bypassing informed consent, I oppose the bill based on the well-known, widely published science that proves these vaccines to be dangerous and irresponsible. That the CDC and pharmaceutical companies choose to ignore the thousands of pages of peer-reviewed studies, while gaslighting awakened citizens as being “anti-vaxers” doesn’t make the studies and proof less credible.

The Gardasil vaccine is unsafe:

1. For many years, I’ve been running a wellness practice in Connecticut where 70% of my clientele are women struggling with infertility. The sheer number of women aged 29-35 who have been trying to conceive for **years** is staggering. Treating women younger than myself has been devastating for me as a practitioner. **My clients have attributed their health issues directly to the HPV vaccine.** In addition to infertility, they struggle with endometriosis, loss of menstruation, Postural Orthostatic Tachycardia Syndrome (POTS), fatigue, loss of ability to play sports, and poor quality of life.

2. Gardasil was only “tested” with 1100 girls before being fast-tracked into the vaccine mill. Gardasil targets two strains of HPV (16 and 18) but allows other strains to multiply and cause more virulent strains to take their place. How is this beneficial? (Source: February 2016 *Journal of Pediatrics*)

3. Gardasil has the highest concentration of aluminum, **a known neurotoxin**, then any other vaccine, genetically modified, creates lifelong health issues including infertility.

4. When parents become awakened to the toxic chemicals in this vaccine, they say NO. This is why informed consent is paramount. Children deserve to not be harmed at age 11 to supposedly protect against a cancer at age 56. The human body, when left alone and not inundated with copious amount of vaccines, knows how to heal itself if given a chance.

The meningitis vaccine is unsafe:

1. The meningococcal vaccine is unnecessary, and the risk of injecting more aluminum into our children is far greater than the miniscule risk of contracting meningococcal disease.

2. 20% of teens already have immunity to these bacterial strains, and immunity builds naturally as time goes on. Therefore, adults like me are not being pressured to get the injection. **Parents have the right to choose to let kids develop natural immunity to these bacterial strains, if that’s what they believe is best. The government doesn’t get to decide this, especially given the toxic dose of aluminum that no brain is designed to tolerate.**

3. Messing around with the microbiome in our bodies has never been a good idea. We are seeing what the overuse of antibiotics has done.

We have never seen a generation so rife with mental illness and autoimmune disease than we have today. This is the true Public Health threat.

- Who will fund the Special Education budget, which is forced to increase 10-12% each year?
- What kind of jobs will hire the members of the autism tsunami, who will be turning 18 in a couple of years?
- What kind of jobs will accommodate the growing number of young people who will enter the workforce extremely ill? What will this do to our healthcare costs and insurance premiums?
- What will our military look like in 10 years when our young people are too sick to stay in the military longer than a few months? Does that leave us vulnerable?
- When Generation X and Y become elderly, how will millennials care for us, when they are sicker than we are, on account to receiving triple the amount of injections?

Why is no one asking these questions?

Dr. Jill Stein stated in her run for presidency, “No society has ever survived by devouring its younger generation.”

Please protect parents’ right to NOT allow their children to lose their future to a vaccine.

Monica Szymonik, Glastonbury, CT
