This letter is written testimony to the Committee on Public Health Bill No. 94

To whom concern:

Im a loving mother of three lovely children that are in the ages between (2-14 yrs old). I have the capacity of making decisions that will suite my children health. I do not wish for the government to pass Bill 858 where it gives permission for my children to make medical decisions without my consent. This actually feels like a breech to my parental rights. I'm a very educated mom and research everything that will impact my family like food, hair products, soap, carseats, educational strategies ... anything that can have a negative or positive effect in my family.

As I take my time to write this letter on this busy Sunday, I really want you to hear and feel my frustration as a mom thats very protective. You see my kids are my everything I would never jeopardized my children health and that is very precisely why I do not agree with anyone doing any medical procedures without my consent. For example my son has allergies and he doesn't know all the ingredients that contain vaccines let supposed someone vaccinated my child without my consent how can I possible protect my child if Im not present and I have no knowledge. Hope that make sense.

To finalize, it is very important for my family to exercise our freedom of religion and our rights to deny any medical procedure. I strongly believe God created us with perfect bodies, their is no need to inject foreign DNA cells from aborted babies. Vaccines manufractioner production also involves the use of material from other species (cows, pigs, monkeys, ect.). I choose to keep my natural immunity given to me by my God when I was created in my mothers womb. I firmly believe God is my only protector so I place all my faith and trust in him.

1 Corinthians 15:44

"It is sown a natural body; it is raised a spiritual body. If there is a natural body, there is also a spiritual body."

Sincerely,
Pricilla Castro
