

Dear House Members,

I am opposing SB 94 which would allow a pharmacist to give a child from the age 12+ a flu vaccine.

A pharmacist's job is to focus on the safety and effectiveness of medications use. Not to administer a flu vaccine. To become a doctor you need years and years of hard work. And to become a pharmacist technician for say that works with a pharmacist only few months. I think that this isn't a pharmacist job but a nurse or a doctor that actually know what they doing, and can help you make a informed decision.

Sincerely,

Monika T.
