Issue

This report provides the number of union and non-union state employees in each of the last 12 years. It also provides the number of state employees paid under the state's managerial pay plan during each of those years. It updates OLR Report [2017-R-0153](#).

Union, Non-union, and Managerial Pay Plan State Employees, 2008-2019

The table below shows the number of full-time union and non-union state employees in each year since 2008. It also shows the number of state employees paid under the state's managerial pay plan. Employees paid under the managerial pay plan are those paid under the CORE-CT payroll system's [MP-02](#) labor unit code and do not include all state employees who might be considered "managers" for collective bargaining or other various purposes. All data for 2019 is current as of May 1, 2019.

The table is based on payroll data provided by the Comptroller's Office using CORE-CT. CORE-CT is a statewide system in which each agency (and sometimes numerous people within an agency) adds its own data, so there may be inconsistencies in data entry and employee categorization. The data includes employees of quasi-public agencies, such as the Connecticut Development Authority and the Connecticut Housing Finance Authority. While employees of quasi-public agencies may be paid from sources other than state funds, the employees are considered state employees for pension and benefits purposes and are typically included in the count of state employees.
