I beleive all adoptees should have the same access to their birh record and documentation as every other citizen does. We deserve all the same rights as every other human being.

I am an adoptee at 50 years old. The medical information I received from having access to my birth records has been essential to my personal health care regimen. I do wish I had this information earlier in my life. I have left so many health history forms blank in my life leaving me feeling powerless to help physicians understand my health conditions.
