

Did you know that vaccines now contain Glyphosate in independent laboratory testing?

This is why we NEED EXEMPTIONS, because the data supplied by the pharmaceutical industry is falsified. This list was made before the glyphosate discovery. It is in the flu virus as well. Polysorbate 80 allows the toxins to cross the blood brain barrier.

Would you put these in your babies or children knowing they have never been tested for safety?

The Toxic Ingredients in Innoculations

<https://www.westonaprice.org/health-topics/vaccinations/adjuvants-in-vaccines/>

Most people who vaccinate their children do not realize the kind of ingredients contained in vaccines—and even if they do know, they may not fully understand what that particular ingredient does or what it means. This article is written to help those individuals better understand what they are injecting into the bodies of their loved ones.

What prompted me to put this list together was the staggering number of people reporting adverse reactions to vaccines. I wanted to know why so many children experience many of the same reactions. What I found was that many of the adverse reactions fit into many of the side effects of many ingredients contained in vaccines. Please educate before you vaccinate! Don't wait for something bad to happen before you begin researching vaccines.
