

Dear Sen. Osten, Rep. Walker, Sen. Hartley, Rep. Dathan, Rep. Nolan, and esteemed members of the Appropriations committee,

I am honored to have the opportunity to share these documents in support of HB 6662. These contain material from the study by Prof Raj Chetty- Lost Einsteins which is very heartbreaking to read. The other three documents are very revolutionary information at the time it was published. Besides Place- many other factors must be addressed. Including Trauma, Social Determinants of Health, and Vocabulary Gap. But, Prof Raj Chetty's presentation Lost Einsteins and the discussion that followed the presentation at the Brookings in January 2018 has very important data we can begin to use now to quadruple the number of inventors that can produce high impact inventions in the population at age 30 if we can foster the development of invention potential [starting from 3rd grade based on equivalent math ability] across gender and race barriers to equalize the rate of inventors emerging from higher income white populations at the present time.

I welcome your comments. Please feel free to share these documents.

Velandy Manohar, MD.,

Medical Director- Aware Recovery Care- CT,

President- ARC In-Home Addiction treatment- PC

Distinguished Life Fellow- American Psychiatric Association,

Am. Health Council- Best in Medicine- 2018
