

To the Energy & Technology Committee:

The purpose of this testimony is to show my support for SB 882, a 100% Zero-Carbon Grid. I strongly support a 100% zero-carbon grid, the sooner the better. This bill supports energy efficiency, which is a key method of decreasing the carbon pollution that is causing climate change and threatens the well-being of everyone on this planet. We need to improve grid stability as CT procures more electricity from wind and solar, and this legislation will help DEEP meet the goal of grid stability.
