

3-4-2021

I am writing to express my support for SB882.

The passing of this bill is a necessary step in forging the path towards a carbon free future in our state. The climate catastrophe is happening now, and we must do everything we can right now to create a safer, more sustainable world.

The following must be added to Section 1 of SB882:

1. Require all supply AND generation to be 100% zero-carbon by 2040.
2. Develop a more aggressive final target for greenhouse gas emissions. Require net zero CO2 emissions by 2050.
3. Establish a moratorium on new fossil fuel plants.
4. Clarify DEEP Commissioner oversight role, including checks and balances.

Thank you.
