

To whom it may concern,

State controlled healthcare will not help anyone. I do not want the same level of service that is given by the Connecticut Department of Motor Vehicles.

A suggestion to lower healthcare costs in Connecticut by Hugh Blake.

Expand the role of physician assistants, dental hygienists and marriage and family therapists.

Our goal should be to be to quadruple the number of these professionals. As a state, we can provide incentives to individuals by funding the training through our state community and technical colleges with incentives for service to disadvantaged people. The market place will adjust with lower costs. We will enjoy more care, better health and finally break the downward spiral of too few dentists, physicians and therapists that benefits only the insurance and hospital industries.

Warm regards,

Hugh D Blake
