

Dear Insurance Committee,

I am writing to voice my objection to SB 842. I am very much against government run healthcare. Anything government runs tends to be higher cost than the private sector. Quality of care will go down while the cost will increase. While the public may not see the cost increase specifically for out of pocket healthcare cost, we will incur much higher taxes. Additionally business colleagues in countries with government run healthcare have told me that those who can afford it go to private practitioners due to the quality of government care and the long wait for care. Just look at the VA system as an example. If you can't provide adequate care for our veterans, how will you take care of the general population!

Respectfully,  
Dennis Steiger
