

Once again, the attack begins to remove the voice of the people who did vote to keep their Freedom of Speech. As a Registered Nurse teaching and providing information about wellness and health is paramount. Informed decision is a battle all those in Healthcare have fought hard to protect. Under the Authority of the State of CT, The Department of Public Health I have the up to date knowledge backed by research and first hand knowledge to share that with each woman who come to sit in front of me. I also have the backing of my Medical Director Dr Daniel Oniell, our Board of Directors and our approved Policies and Procedures. Every woman has great value, but she can only make appropriate decisions if well informed and not coerced about time constraints which in CT no longer are an issue. A woman has the right to gather all her options and decide who and how she can move forward with the decisions in her and her baby's life with all of the appropriate information. This Bill has continuously been so vague about it's language, and to what language we as providers can use, but I stand as an American. The Constitution of this Republic says I have the Freedom of Speech even with a mask to speak the Truth without fear of reprisal or persecution. And as the preamble states to stand for LIFE ! My inalienable right!
