

To Whom It May Concern:

I am writing this letter in response to the upcoming meetings which would ban such rifles as the AR-A3 15 Bushmaster, Stag, Rockville also the Magazines with a factory set limits above 10 rounds. It was not made clear as to how this would help solve the problems with Mental illness, Background checks and the following of strict laws on gun violence if a crime is committed today that are not followed. In enforcing these types of Bill's I understand that the (Ar or Like looking) would not be grandfathered and responsible gun owners would not be compliant and face harsh penalties. Also Magazines over the 10 round threshold will be taken away from law bidding citizens. I find this quite unfair and unreasonable as they were purchased legally and with the understanding that the magazines were designed for Pistol/Rifle in mind.

- Is there data that would support the unlawful use of a gun from that of a law bidding gun owner vs an illegal position?
- How have you come up with the 10 round capacity?

I have not herd of how any of these plans help stop guns from getting in the hands of someone with a Mental illness.

How do you plan on enforcing the penalties we have now on illegal possession of a fire arm and used in a crime?

In confiscating a person's belongings especially when purchased in a legal manor find as being non constitutional. Please explain your thought process behind these bills in question and what data we have today to provide to the public to show the changes will in fact control corruption and unlawful use of firearms by criminals.

Best regards,
