

The health of our soils determine the health of our people both physical and mental .healthy soil produce healthy plants , healthy plants produces healthy people . Our farms need improvements to produce high nutrient dense foods capable to heal and re-generate our cells wall. I suggest to learn from the 30 years study , ORGANIC CAN FEED THE WORLD! And I suggest to visit Cuba for their greath work they are performing on FARMS! Here in the free world our people have NO FREEDOM to know if our food is genetically mutated . In the communist Cuba people are partnering with nature! And nature reward them with a GREEN REVOLUTION to be proud of. We can do better !! If we develop a passion with an open mind to allow the perfect universe to come to the rescue of healthy people if we eliminate most pesticides from the face of this planet! And we need to mineralize and balance our soils ! We need to teach ECOLOGICAL LANDSCAPING without the use of pesticides to the general public to give them the opportunity to partner with nature for the health of future generations of people and pets!!! Sincerely. Mike g papa artscape organic care Llc

I hope all of you CARE !!!!
