Dear Parents, Teachers, Administrators, Government officials, and our Youth,

I would like to take this time and express my appreciation and will to drive Bilingual Education in public schools.

Learning world languages is a useful and fun skill to acquire. These programs have the opportunity to shape and change the lives

of our youth. When students have the chance to learn other languages, they are able to see the world from a new perspective.

Students can enhance their communication ability, and interact with others but most importantly they are able to learn about culture.

Students are able tap into their curiosity of the world through learning languages. Students will want to travel and see new things that our outside of their normal environment. The new perspective and outlook on what the world can offer can really make students surprise themselves. It can change your life and I know this from experience. I'm a 32 year old graduate student and I love learning about languages and the world. I can only imagine the bright possibilities that students will encounter from having the chance to learn other world languages. Thank you for your time and consideration.

Sincerely,

Brad Manwaring
