

Draft MQISSP Model Design – July 1, 2016 Implementation

This diagram is intended to illustrate the proposed MQISSP model design and identify areas that have been informed by stakeholder input.

Wave 1 Performance Year 1

Analysis

Results

Principles of Model Design

- Participating Entity requirements
- Target population
- Minimum number of assigned members
- Retrospective attribution for prospective assignment

Principles of Model Design

- Comparison group approach
- Concurrent risk adjustment methodology
- Truncation of high cost claims
- Benefits included in the shared savings calculation
- Meeting identified quality and improvement

Principles of Model Design

- Hybrid savings pool to distribute shared savings
- Absolute quality and improvement factors
- Upside only model
- No MSR and a savings cap of 10%
