Data Summarization	CT Dual PopDat 2007-2010 Riskcluster 10Mar2012 16:42
DUA Number	21665
DUA Title	CT MCD 2007-2010
Overall Query	Calendar Year = 2010 and Medicaid Eligibility Basis one of Elderly,Blind/Disabled,Families/Children and Medicare A-B = Parts A and B and Medicare HMO = No Medicare HMO and Calendar Year = 2010
Data Sheet 1	Cluster PCC Type vs. Population Count:Community Other,Population Count:Community LTC,Population Count:Nursing
Additional Query	Age bands(3 levels) based on age at end of year = 20-64 and Development-MR Disability = Yes

Summary

Home,Population Count:Waiver

Data Sheet 1

Cluster PCC Type	Community Other	Community LTC	Nursing Home	Community Waiver	Total
No PCC	209	21	88	544	862
MD - GP	1,006	289	906	3,718	5,919
MD - Geriatrician	-	-	11	36	47
MD - Multi Specialty Clin	-	-	-	21	21
MD - Psychiatrist	28	-	40	75	143
Outpatient Clinic	284	92	52	621	1,049
Total	1,527	402	1,097	5,015	8,041

Data Dictionary

Id	Column	Description	Value
func_pcctyp	Cluster PCC Type	Code File Flag for Provider Cluster Linkage	
popcnt	Population Count	Column Filter : January LTC Status = Community Other Number of unique individuals in a population. If the population is aggregated over a series of sub-populations or groups that are not mutually exclusive, double-counting would otherwise occur. iMMRS automatically adjusts for such duplications and generates a count of unique individuals. In these counts, each individual is assigned their earliest observed values in the study period. However, double-counting can still occur if population totals are performed apart from iMMRS, for example in Excel spreadsheets.
