Connecticut Valley Hospital

Physical Therapy Services

Goals

1. To restore and maintain an optimum level of function to permit active participation in the patient’s forensic/psychiatric/substance abuse/geriatric rehabilitation program.

2. To provide Physical Therapy Services that develop the highest level of function in locomotion, Activities of Daily Living, and understanding of the physical limitations which the patient’s disease or injury creates in order to provide the smoothest possible transition to living in the community or a less restrictive environment.
